CLOUD COMPUTING

Main idea:

The main idea of this text is cloud computing, the advantages and disadvantages of using it and how this type of resources and services evolved over time.

Summary:

Cloud computing started because it was complicated and time-consuming to share information between computers in addition to the high costs, before this resource the information was stored on the computer's hard drive and the programs that companies required for the development of their work as well, Therefore, cloud computing began to be implemented and developed, which is a space on the Internet where information is hosted and can be accessed through devices from anywhere in the world, it can be used by companies and also by people, this facilitates access to information and reduces costs, in addition to the information, applications, programs and web pages are hosted that can be used in the same way from anywhere and with any device, it is important to take into account the issues of access to security for prevent unauthorized persons from accessing the information.
